

What you don't know can hurt patients. >90% of bacteria do not grow in culture!

With the power of our proprietary molecular methods... See what you have been missing!

Comprehensive analysis: 99% coverage of all known bacteria, yeast & fungi...

Methods validated through clinical experience with patients... just like yours.

Bioinformatics driven treatments. Continuous improvement built in.

Founded by clinicians for clinicians.

Culture negative? NO LONGER!

Level I Initial Screen.

Wound Panel or ENT Panel

Provides rapid diagnostics of the most common wound or ENT pathogens and resistance markers. Results within hours of receiving the sample.

Our Level I test will quickly indicate if your choice of therapy is on target.

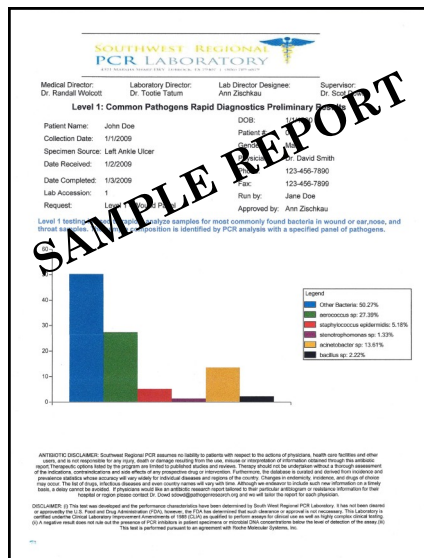

Level II 7ca dfY Ybgj Y8 JUl bcghW

BacteriažMUgž/ : i b[]

Truly a **universal** diagnostic test. If it is a bacteria or a yeast/fungal infection, we will identify it. This includes new and emerging bacterial and fungal pathogens. We can give you an indication of what they are and how they may be treated.

Finally, get the comprehensive information you need for a comprehensive treatment regimen!

For every mistake, two are made for not knowing!

Introducing
 The Next-Generation
 Of Pathogen
 Diagnostics!

Culture Negative?
 NO LONGER!

Tel: 806.771.1134

The next generation of diagnostics is finally here!

- More powerful than ever.
- It is now known that **less than 10% of bacteria can be cultured in the laboratory.** With 90% of bacteria unable to grow why use culture? Traditional cultures are outdated both in simple detection and accurate identification.
- Our diagnostic methods are **fast, accurate, sensitive** and *do not* rely on the ability of a pathogen to grow in the laboratory.
- First, we brought the power of DNA analysis to our patients and now *we want to partner with clinicians nationwide.* No other lab in the world offers the accuracy (99%), speed (24-48 hours), bioinformatics and a secondary comprehensive analysis!

Level I testing for Wounds and ENT

This rapid, quantitative screen includes:

- *Staphylococcus* (including MRSA)
- *Streptococcus*
- *Haemophilus*
- *Enterococcus* (including VRE)
- *Pseudomonas*
- *Serratia*
- *Candida*
- And more!!!

Level II testing is

Universal and Comprehensive (any bacteria or fungi can be identified and their contribution to an infection indicated).

Rapid, Accurate, Sensitive:
Level I molecular pathogen diagnostics for both Chronic Wound Infections and for Ear, Nose and Throat pathogens.

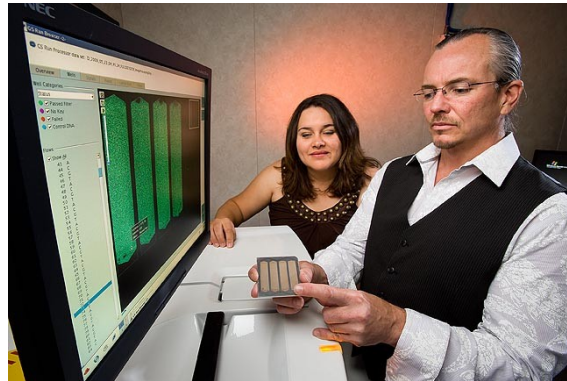

COMPREHENSIVE, UNIVERSAL:
Level II Testing
Identifies >99% all bacterial and fungal pathogens.

Reduce suffering, save lives and reduce costs for our patients!

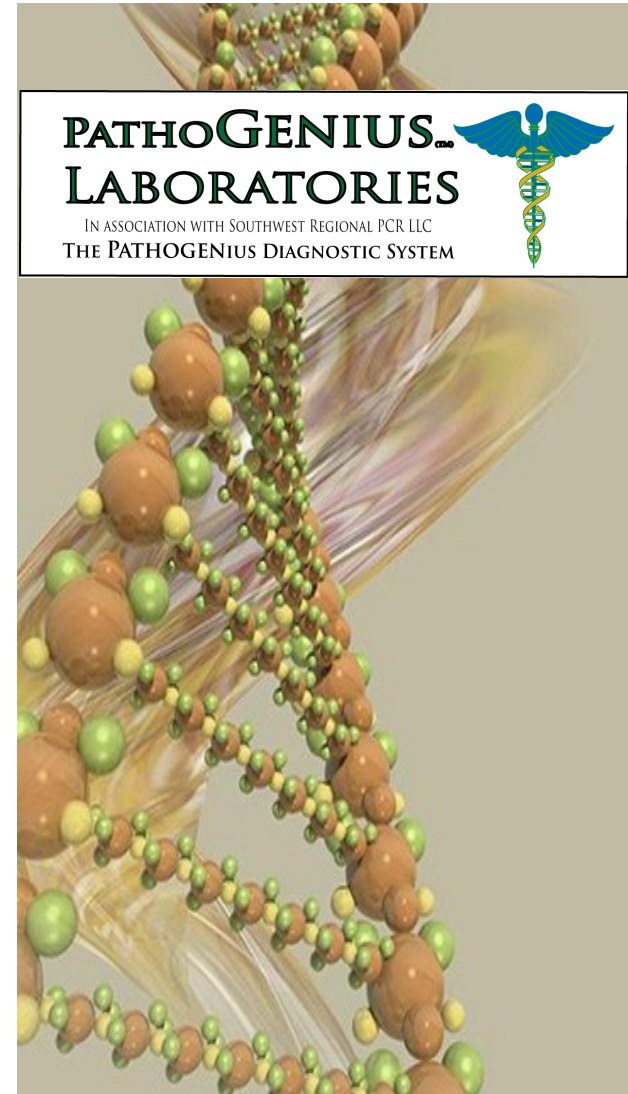

Why rely on ab basic panel of a few pathogens when you can know the full microbial reality?

Our Level II testing is Universal regardless of the bacterial or fungal pathogen!

THIS INCLUDES NEVER BEFORE DISCOVERED PATHOGENS.
Our Level II comprehensive testing will give you REAL answers and ability to respond.

CULTURE NEGATIVE?
NO LONGER!
